Tire Safety In The Workplace

Summary

This Bulletin is issued to maintenance vendors and pool management staff in order to emphasize the safe handling of tires. All mechanics performing repairs on CCM pool chassis should be briefed and properly trained to ensure compliance with this and all CCM publications.

Information

Safe work practices are paramount in the handling of tires and rims. The consequences of a mechanic taking shortcuts can be hazardous for the mechanic, and pose a threat to public safety.

In the interest of public safety, and consistent with our commitment to safety in the work place, CCM wishes to reemphasize the accepted practices pertaining to the safe handling and installation of tires on intermodal chassis.

We encourage you to review these procedures with your supervisory staff and mechanics, and to include a review of tire safety procedures in your regular audit processes.

Additional information on this topic, including training references and videos, may be obtained by visiting the **Accuride Corporation** web site at http://www accuridewheels.com/safety_manual.asp.

CCM requires that all repair vendors observe OSHA and DOT guidelines regarding the safe handling of tires and Rims. Specific attention should be given to the following articles:

DOT Rule 1910.177(F) contains the regulations pertaining to the safe mounting and handling of truck tires on **multi-piece rims**

DOT Rule 1910.177(G) contains the regulations pertaining to the safe mounting and handling of truck tires on **single piece rims**

Please direct any questions pertaining to this bulletin to CCM's M&R Technical Services Manager or the Director of Maintenance at your earliest convenience.

"Tomorrow—Your reward for working safely today."
