Technical Bulletin**No. 62****Published:** 29 July 2021**Topic:** Brake Chamber Dust Plugs

The purpose of this document is to clarify the requirements on when to replace and/or resecure brake chamber dust plugs.

All new construction chassis and all aftermarket brake chambers purchased by CCM come with dust plugs installed. While they are highly recommended for the longevity of the chambers, they are not a necessity. The chambers being installed on new production as well as those used by CCM have a coating on the interior of the chamber as well as drain holes to prevent the buildup of moisture inside the chamber.

For this reason CCM would like to remind all parties that replacement and/or resecurement of brake chamber dust plugs should only be performed in conjunction with an FMCSA inspection. They are not to be replaced/resecured at any other time
